

SCOTTY™

Airborne ISR

transporting headquarters into the plane

Commanders on the ground receive airborne HD imagery, live video, GPS info, and targeting data while remotely controlling sensors, sharing data, and talking to crews. All of this, and more, available over satellite from all kinds of aircraft anywhere in the world.

With the SCOTTY beyond line-of-sight offering, crucial missions become more successful: range is unlimited and the link is weatherproof, commanders can manage operations and support pilot decisions in real-time, and aircraft need not return to review and secure data. Furthermore, the airborne SatCom link can forward local line-of-sight (LOS) RF video from ground transmitters.

Aiding in the decision process on the ground, the link can also be shared (multi-point) or streamed over IP to other command centers and recorded.

The SCOTTY airborne offering: bringing headquarters to the aircraft so that commanders can make informed, real-time decisions.

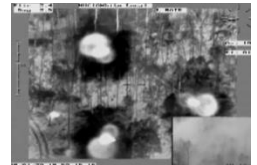

SPECIAL OP's

FISHERY MONITORING

POLLUTION MONITORING

FIRE FIGHTING

BORDER & COASTAL SURVEILLANCE

Cover long distances for Intelligence, Surveillance, and Reconnaissance (ISR) missions and still stay in full interactive contact with decision-makers at home.
