

SCOTTY™

Video Communication

advanced comms for advanced applications

Ruggedized, portable, and easy to use, SCOTTY is deployed in the field, on vehicles, ships, and in the air.

SCOTTY technology is optimized for low bandwidth SatCom, is compatible to IP military encryption and to other VTC systems.

Zone 1 & Zone 2 tempesting also available.

Applications are numerous. For example, in peace keeping missions, SCOTTY offers reliable and secure video and data communication from the field to HQ. Additional data channels parallel to the video stream enable remote access and control of equipment for tele-maintenance and support.

Because SCOTTY provides mobile live HD video, and HD imagery transfer, combat camera teams can work on the move.

SCOTTY can be deployed on ships for naval C4I, for ship to shore telemedicine applications, and on aircraft for those who need to stay connected.

Comms for disaster relief is possible in areas where terrestrial networks (GSM, 3G) are not available or have been destroyed.
